

## Assignment -2

Assignment Date	28 September 2022
Student Name	SANJAY S
Student Roll Number	730419104304
Maximum Marks	2 Marks

### Question:

Create a Flask app Add the Home page , About page Add the Bootstrap, Add the Signin page and Add the Signup Page .

### Solution :

```
from flask import Flask, render_template,request,flash,redirect,url_for,session
import sqlite3

app = Flask(__name__)
app.secret_key="123"

con=sqlite3.connect("database.db")

con.execute("create table if not exists customer(pid integer primary key,name text,address
text,contact integer,password text)")

con.close()

@app.route('/')
def index():
    return render_template('index.html')

@app.route('/login',methods=["GET","POST"])
def login():
    if request.method=='POST':
        name=request.form['name']
        password=request.form['password']
        con=sqlite3.connect("database.db")
```

```

con.row_factory=sqlite3.Row

cur=con.cursor()

cur.execute("select * from customer where name=? and password=?", (name,password))

data=cur.fetchone()

if data:

    session["name"]=data["name"]

    session["password"]=data["password"]

    return redirect("customer")

else:

    flash("Username and Password Mismatch","danger")

return redirect(url_for("index"))

@app.route('/customer',methods=["GET","POST"])

def customer():

    return render_template("customer.html")

@app.route('/register',methods=['GET','POST'])

def register():

    if request.method=='POST':

        try:

            name=request.form['name']

            address=request.form['address']

            contact=request.form['contact']

            password=request.form['password']

            con=sqlite3.connect("database.db")

            cur=con.cursor()

            cur.execute("insert into

customer(name,address,contact,password)values(?,?,?,?)",(name,address,contact,password))

            con.commit()

```

```
        flash("Record Added Successfully","success")
    except:
        flash("Error in Insert Operation","danger")
    finally:
        return redirect(url_for("index"))
        con.close()

return render_template('register.html')

@app.route('/logout')
def logout():
    session.clear()
    return redirect(url_for("index"))

if __name__ == '__main__':
    app.run(port=5000)
```

The screenshot shows a web browser window with the title "Registration". The address bar displays "127.0.0.1:5000/register". The page has a light blue background. In the center, there is a white registration form with a blue header "Registration". The form contains four input fields: "Name" (with the value "SANJAY"), "Address" (with the value "123/45"), "Contact" (with the value "7654321678"), and "password" (with the value "987654321"). Below the input fields are two buttons: a green "Register" button and a blue "Back to Home" button.
